

Professional Fingerprint Access Control and Time Attendance System T60

Installation Site: CBD Office from Barcelona Spain

○ Brief introduction:

Due to the need to improve the security of a offices building, allowing the employers to get in and out during they working period of time without using the main door's key and record their working hours. They decided to install a control presence/access system in the main door.

○ Product:

Hardware: Anviz professional access control and time attendance T60

Feature:

- Compact design
- Multinational language
- Fingerprint, RFID, Password
- Direct Lock control
- Timezone access control
- Mini USB, RS485, TCP/IP, Wiegand input/output

Software: Time attendance and access control software of Anviz

○ Requirements

- Controlling the opening of the door only to authorized registered persons within a period. After the working hours a key will be needed.
- Ability to read fingerprints and optionally cards for special cases in which the finger is not possible.
- Presence control with reports of hours worked.
- Ability to provide custom reports.
- Improve the security in a simple way.

○Solution

Anviz T60 was chosen to provide a presence/access control with Ethernet communications.

Installed inside the office and connected to an electric lock to allow only authorized persons to enter and leave the office without using the key.

It also provides a basic time control in order to detect absences and counting the hours worked. The use of this solution has improved the building security, allowing the personal of security do other tasks than controlling the door all the time.
